No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                           Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia P. salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed Ospa, or an immunogenic fragment of particularly poikilothermic fish, against the bacterial pathogen particularly poikilothermic fish, against the bacterial pathogen rickettsial septicaemia (SRS) and other rickettsial diseases. The present encoding Ospa 17E2 (AAP86247) has been optimised for expression in Ecsherichia coli. An Ospa protein with an N-terminal fusion partner is used in a vaccine to create an anti-Ospa antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121

                                                                                                                                                                                                                                                                                 AAG78025 standard; Protein; 162
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, P. salmonis. The method is also useful for protecting partnogen rickettsial septicaemia (SRs) and other rickettsial diseases. The present construct optimised for expression in Escherichia coli, fused to an undefined N-terminal fusion partner. The fusion protein is used in a vaccine to create an anti-OspA antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Method for protecting poikilothermic fish against salmonid rickettsial septiloaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis
                                                                                                                                                                                                                                                                                                                                                           216

                                                                                                                                                                                                            Poikilothermic vaccine; OspA; SRS; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a s. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animal particularly poikilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The presest sequence represents P. salmonis OspA protein. An OspA protein with an N-terminal fusion partner is used in a vaccine to create an anti-OspA antibody.

The present sequence is that of BASB113 protein from Moraxella catarrhalis strain Mc2931 (ATCC 43617), a causative agent of otitis media in children and pneumonia in adults. The invention provides BASB113 polypeptides, and polypucleotides encoding them, as well as expression vectors, host cells and methods for producing BASB113 polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASB113 polypeptide, an immunogenic
                                                                                                                                      New BASB113 polypeptide isolated from Moraxella catarrhalis bacterium, useful for diagnosing and producing vaccines against bacterial infections such as otitis media and pneumonia
                                                                                                                         Claim 1; Page 67; 86pp;
                                                                                                                                                                                                               WPI; 2001-112458/12.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection comprises at least latibody directed against a BASB113 polypeptide. BASB113 polypeptides also have utility in raising specific antibodies, and in screening for antibacterial drugs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      fragment of a BASB113 polypeptide, or a polypeptide having at least 85% and no acid sequence identity to BASB113, or comprising a polynucleotide encoding such a polypeptide. A claimed method of diagnosing a Moraxella infection involves identifying a BASB113 polypeptide or antibody. A claimed therapeutic composition useful polypeptide or antibody.

This invention relates to a method for the protection against intection of a poikilothermic fish by the bacterial pathogen, piscirickettsia salmonis. The method comprises administering an immunogenic amount of a period particularly poikilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents an immunogenic epitope of the P. salmonis OspA.

Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis -

The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.
AAX91536 to AAX91801 encode two hundred and sixty six antigenic Porphorymonas gingivalis (PG) polypeptide sequences given in AAX34318 to AAX94583. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can

                                                                                                                                                                                                                                                                                                                                                                                                              The PBOMP proteins were isolated from a PBOMP-enriched insoluble cell wall fraction from physically disrupted cells of H. influenzae cell the solubilising the PBOMP from the cell wall fraction by heating in the presence of a detergent or digesting the cell wall fraction with lysozyme, opt. in the presence of a detergent. The genes encoding the PBOMP proteins were isolated by screening a DNA library encoding the PBOMP proteins were isolated by screening a DNA library encoding the PBOMP proteins were isolated by screening a DNA library encoding the PBOMP proteins were isolated by screening a DNA library encoding the PBOMP proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening a DNA library encoding the proteins were isolated by screening and proteins were isolated by screening a DNA library encoding the proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by screening and proteins were isolated by sc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.
                                                                                                                                                                                                                                                                                                               with lysozyme, opt. in the presence of a detergent. The encoding the PBOMP proteins were isolated by screening with an oligonucleotide probe based on the amino acid s PBOMP protein, or using antibodies to PBOMP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Outer membrane protein epitopes of Haemophilus the prodn. of antibodies, in vaccines and for p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-SEP-1988;
